Now, how about a piece for on the side? Maybe the guys of Antropofagus can help, as they offer the market a 35 minutes-lasting brutal death inferno with "Methods Of Resurrection Through Evisceration".

Apart from the intro that consists fanfares and drumbeats, they take no prisoners beginning from the first minute. The music is just like it needs to be. Raw and powerful, fast and direct. Especially "Brutal Dave", who is also active for known bands such as Hour Of Penance or Beheaded, heats the room and makes a lot of pressure with his variable drumming. The guitar work is like it has to be. They flutter with a certain depth and saw trough the auditory canals. Deep growls are added and they match the musical image pretty well.

I have to admit, there is not too much variety within the songwriting, but the direction is clear since minute one. Always straight forward without any digressions. Now and then short stops are inserted in the blastbeat blizzard, but the speed is always the same. Here and there a few short old school solos are played like in "Praise To A Hecatomb" for example.

Above all the drums is responsible, as it structures a main part of Antropofagus' music. It organizes speed shifts, inserts short breaks but still remains the booster of the whole work. There are also instrumental phases inserted, which are groovy and which invite to start your own moshpit within your domestic walls.

Conclusion:

As I already mentioned, "Methods Of Resurrection Through Evisceration" is not a piece for what you have to get in the zone for hours beforehand. Such a disc is to be inserted in the player, if you feel like you need something hard and fast for in the meantime. Antropofagus know their craft and they serve a well done brutal death metal album onto the market. If you like pure and merciless death metal, you can get this one without having to think twice. Antropofagus produced a appealing album with "Methods Of Resurrection Through Evisceration".
